

GUIDE TO THE BOTANICAL CONTRIBUTIONS OF LLOYD H. SHINNERS (1918-1971)

JERRY M. FLOOK

Southern Methodist University Herbarium, Dallas, Texas 75275

The career of Lloyd H. Shinniers in taxonomic botany was, despite its relative brevity, a highly productive one. In addition to his master's thesis and his doctoral dissertation, he authored 276 articles and a 514-page flora of the north-central Texas area. These publications contain 558 new names and combinations. In an effort to make this volume of information more readily accessible, I have compiled a bibliography of Shinniers' publications, catalogued his new names and combinations, indexed the generic names appearing in his writings, and cited published tributes to Shinniers. It is hoped that this assemblage will in some measure facilitate literature research by students of the North American flora.

PUBLICATIONS
